TECHNICAL SKILLS

AI / LLM Systems	LangGraph, LangChain, MCP/FastMCP, RAG, embeddings, vector search, tool/function calling, prompt engineering, structured outputs, context engineering, memory/state, Gemini, Groq, OpenAI API
Evaluation / Reliability	Source-grounded retrieval, AI response validation, debugging agent failures, hallucination reduction, data validation, release checks, UAT, production-readiness checks
Backend / Data	Python, FastAPI, SQL, PostgreSQL, Snowflake, BigQuery, Airflow, GCS, SQLAlchemy, SQLite, MongoDB, MongoDB Atlas, ChromaDB
Customer / Delivery	Technical requirement translation, stakeholder communication, implementation readiness, go-live ownership, issue triage, cross-team coordination, status reporting
Cloud / DevOps	REST APIs, Docker, GitHub Actions, Amazon ECR, EC2, Postman, Git
ML / Data Science	scikit-learn, Pandas, NumPy, YOLOv8, OpenCV, forecasting data preparation, analytical modeling

EXPERIENCE

Impact Analytics	Feb 2025 – Present
<i>AI Analyst, Jul 2025 – Present AI Analyst Intern, Feb 2025 – Jul 2025</i>	<i>Bengaluru, Karnataka</i>
● Own implementation readiness, data quality, and delivery coordination across large retail clients, working across product configuration, forecasting, ingestion, QA, downstream analytics, and client-facing outputs. ● Served as data owner for a client go-live; led validation across business-critical datasets, coordinated fixes across product and engineering teams, and completed launch with zero data-related tickets after release. ● Translate business and client requirements into technical validation logic, release checks, debugging priorities, SQL analysis, and clear implementation follow-ups for cross-functional teams. ● Built a cross-platform cloud data integration pipeline and Python validation tooling for downstream client requirements, enabling reliable movement, reconciliation, and release checks across warehouse and storage systems. ● Debugged SQL defects and pipeline failures end-to-end across warehouse tables, transformations, scheduled workflows, and client-facing outputs; wrote recursive SQL, window-function logic, migration queries, and performance rewrites. ● Designed an incremental forecast reporting framework that stores prior forecasts, refreshed forecasts, and actuals in a running-window structure; scheduled it through an existing Airflow pipeline for client and internal assessment. ● Partnered with Product, Data Engineering, QA, Ingestion, and client stakeholders to present findings, clarify trade-offs, propose alternatives, and drive blockers toward resolution. ● Recognized with Quarter Awards in Q2 2025/Q1 2026 and the Gen AI Pacesetter Award in Q2 2025 for ownership, technical delivery, and AI-oriented contribution.	

PROJECTS

Agentic AI Workspace – LangGraph, RAG, FastAPI	GitHub
● Built a full-stack agentic AI workspace with FastAPI, browser UI, Gemini, LangGraph, tool calling, document upload, memory, and persistent chat APIs. ● Implemented thread-scoped RAG over PDF, DOCX, TXT, Markdown, Python, and CSV files using Gemini embeddings, ChromaDB, SQLite persistence, and LangGraph checkpoints. ● Added tools for web search, calculator execution, uploaded-document retrieval, memory save/recall, and containerized deployment with Docker and GitHub Actions to ECR/EC2.	
US Visa Prediction E2E – ML Engineering, FastAPI	GitHub
● Built an end-to-end ML pipeline for US visa approval prediction covering MongoDB ingestion, schema validation, drift reporting, feature transformation, model training, and prediction serving. ● Implemented modular pipeline stages with typed configuration/artifact objects, mixed-feature preprocessing, company-age logic, SMOTEENN imbalance handling, and F1-based model evaluation. ● Added an S3-backed model-promotion gate and FastAPI/Jinja2 prediction interface that loads the promoted preprocessing object and estimator for raw form inputs.	

EDUCATION

National Institute of Technology Raipur	2021 – 2025
B.Tech in Computer Science and Engineering	CGPA: 8.41

CERTIFICATIONS

- Agentic AI – Skill Up – GeeksforGeeks
- Databricks Fundamentals Accreditation – Databricks
- Postman API Fundamentals Student Expert – Canvas Credentials (Badgr), Jul 2024
